

## SOUNDGUARD'S PATENT-PENDING SOUNDPROOF PAINT

SoundGuard is the easiest, fastest and most cost-effective solution to increase the STC rating of a shared wall by 8+ points.

Our revolutionary, eco-friendly noise reduction coating has been independently and scientifically proven to reduce sound transmission through interior walls by up to 90% making it the closest thing to soundproof paint that has ever been developed.

The proprietary ingredients in our coating accomplish this through isolation, dampening, and deflection. Essentially we are creating an impenetrable sound

barrier on the wall that can block 8-12 decibels at any frequency.

SoundGuard's high-performance, patent-pending coating is not only effective, affordable, easy to apply, and non-invasive but it's also fire resistant, mold resistant and mildew resistant.

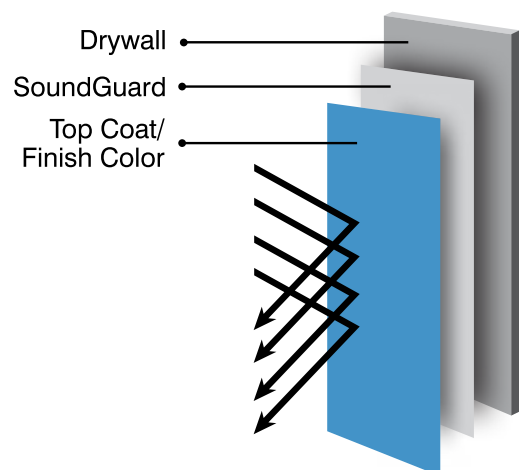

SoundGuard soundproof paint is recommended for all wall surfaces where a reduction in sound transmission is needed. Our groundbreaking product is perfect for hotels, apartment buildings (multi-family housing), condo buildings, office buildings, hospitals, retirement facilities, universities, dorms and student housing.

**50%** LOWER COST THAN  
COMPARABLE SOUNDPROOFING  
SOLUTIONS

**10** | YEAR LIMITED  
WARRANTY

SoundGuard's easy-to-apply spray-on vinyl acrylic acoustic coating is only available in an off-white eggshell finish, which then allows the application of a top coat paint or wall covering.

It is applied in three crosshatched coats of 22-24 wet mils each, which after curing results in a total of 30 dry mils, about the thickness of a credit card. SoundGuard provides a coverage rate of 22 square ft per gallon (which includes all 3 coats).

# FREQUENTLY ASKED QUESTIONS

**SoundGuard** is a soundproofing company that provides innovative solutions to commercial, residential, and industrial clients. Our revolutionary, patent-pending soundproofing paint aka sound reduction coating was developed specifically to reduce and/or eliminate sound transmission through walls.

## What is the cost of SoundGuard soundproofing paint?

This revolutionary sound reduction coating costs only \$3-4 per sq ft (including installation), which is 50% less than alternative soundproofing solutions.

## How effective is SoundGuard at reducing noise transmission?

The standard 3-coat application increases the STC rating of a shared wall by 8+ points which means that wall after being treated with **SoundGuard** is reducing the sound transmission by 8-12 decibels.

## Where can SoundGuard paint be used?

**SoundGuard** soundproofing paint is designed to be applied to shared, demising walls in a variety of applications such as in hotels, apartments, condos, offices, and universities. It can be sprayed onto existing walls thus providing an easy soundproofing solution during renovation and retrofit projects.

## Is SoundGuard paint eco-friendly?

Yes, SoundGuard paint is a water-soluble, low-VOC product.

## How much paint is needed to provide adequate soundproofing?

**SoundGuard** can be applied to any surface using a commercial airless sprayer using a 3 coat process at 22-24 wet mils per coat for a total of 68-70 wet mils which then dries down to 30 dry mils, about the thickness of a credit card.

## Does SoundGuard paint come with a warranty?

**SoundGuard** paint comes with a 10-year limited warranty against peeling, cracking, chipping, flaking, or sagging.

## How is SoundGuard paint applied?

The standard application for **SoundGuard** is 3 coats at 22-24 wet mils per coat for a total of 68-70 wet mils which then dries down to 30 dry mils. Dry time is 2-3 hours per coat depending on air flow, room temperature and humidity levels. Most rooms can be completed within 1-2 days.

## Why should you use SoundGuard instead of other soundproofing materials?

Not only is **SoundGuard** easier to apply, but it is much more cost effective than other soundproofing solutions. **SoundGuard** is a non-invasive application which can be sprayed onto existing walls in just a few hours while reducing sound transmission by 8-12 decibels.

## Can we test SoundGuard paint in our property?

Yes! We provide mockups of two adjoining walls or rooms to prove the effectiveness of our soundproofing paint.
